Join the American Solar Grazing Association (ASGA) for a dynamic, one-day agrivoltaics training designed specifically for solar developers, asset managers, and operations teams. The workshop provides a clear, practical overview of how to effectively integrate sheep grazing into solar site management, grounded in real-world experience and industry best practices.

The training will include a morning session at RE+ Midwest in Schaumburg, IL, followed by an optional on-site tour of a nearby solar grazed site. Participants will gain a firsthand look at how grazing works in practice and leave with actionable insights to support successful implementation. Upon completion, participants will receive a certification from ASGA.

Please let us know if you intend to participate in the afternoon solar grazing site tour. Transportation to the site tour will be provided.

WHAT YOU'LL LEARN:

- Site design considerations for solar sheep
- Benefits of using sheep
- What a grazed site looks like
- Sheep safety & well-being
- How sheep are managed on solar sites
- Livestock herding and guardian dogs
- Operational site expectations and strategies
- Principles for enduring farmer partnerships
